

Appendix Table A1: Characteristics of the Microdata Sample from the 1970, 1980 and 1990 Population Censuses of Indonesia, Peninsular Malaysia, the Philippines, and Thailand.

Country and Year	Sampling Fraction	Unweighted Sample Size All Persons	Adjusted Sample Size Women 15-44 ^a	Percent of Children Matched to Mothers
Indonesia 1971	0.038	634,647	139,112	92
Indonesia 1980	0.050	7,234,962	1,611,093	96
Indonesia 1990	0.005	912,554	204,932	97
Peninsular Malaysia 1970	0.020	176,287	35,706	95
Peninsular Malaysia 1980	0.016	182,593	41,954	90
Peninsular Malaysia 1991	0.020	347,892	62,120	98
Philippines 1970	0.050	1,651,506	357,846	96
Philippines 1980	0.050	2,260,602	501,614	96
Philippines 1990	0.100	2,000,685	268,285	98
Thailand 1970	0.020	772,251	161,246	96
Thailand 1980	0.010	388,080	91,081	92
Thailand 1990	0.012	485,096	186,475	96

Notes: The census microdata samples were constructed with varied sampling designs and consequently different weighting procedures are used. The analyses reported here is based upon the weighted data, but the weights have been deflated so that the weighted sample size equals the original unweighted sample size. The Malaysian microdata samples are not weighted (all three censuses are systematic random samples). In order to minimize computation, random samples of the largest files were drawn: .18 of the 1980 Indonesian file, .67 of the 1970 Philippines file, .50 of the 1980 Philippines file, and .25 of the 1990 Philippines file.

^a These figures have been adjusted by the sample weights and deflated to the unweighted sample size, however, they do not reflect the sampling for computational purposes, as noted above.
