

Table 6a: Models of Fertility Change from 1968-70 to 1978-80 for All Women, age 15-29, and for Married Women, age 30-44, in the Philippines. (The effects of the contextual variables and parity are unstandardized regression coefficients; the effects of the other independent variables are deviations from the grand mean of fertility from the combined sample of the 1970 and 1980 censuses.)

Notes:

1. n.s. This coefficient(s) is not significant at the .001 level.
2. - Categories with missing data are coded as dummy variables and included in each model, but the coefficients are not reported here.
