TECHNICAL INFORMATION ON THE DATA TAPE

The sample of the 1985 intercensal population survey of Indonesia is stored as 2 files, each on a separate tape. To access the data file, use the following information:

Tape Identification

Data Set Name

VOL = SER = BN0229

DSN = CH186

(Backup BN

VOL = SER = BN0117

DSN = CH191

(Backup BN

For both tapes:

LRECL = 214

BLKSIZE = 32100

LABEL = (1,SL)

RECFM = FB

DESCRIPTION OF DATA FILE

Introduction

The following information is taken directly from the Biro Pusat Statistik's publication, 1985 Intercensal Population Survey (SUPAS) organization and methodology. The 1985 SUPAS is conducted for the entire geographic area of the country, and covered all persons with permanent residence. Person in special census blocks and institutional households are not included in the sampling frame. Also different from population censuses, SUPAS does not cover persons without a permanent residence such as ships' crews, isolated groups, homeless people nor Indonesian citizens living abroad.

Considering population characteristics are basically evenly distributed throughout the country, the sample selection is such that every region is represented. The design is in accordance to BPS' policy to optimize the allocation of workload among its field workers.

Sampling Design

In general the country is divided into two on the basis of the average population density in each kecamatan (sub-district). The first category includes all provinces with dense population, i.e. 8 provinces in Sumatera, 5 provinces in Java, the province of Bali, and 4 provinces in Sulawesi. The second category covers the rest of the country, i.e. 4 provinces in Kalimantan, West and East Nusa Tenggara, East Timor, Maluku and Irian Jaya.

1. Sampling frame

In selecting the census blocks, the sample list constructed during the 1983 Census of Agriculture is used. This list is comprised of 20 percent of all census blocks formed for statistical purposes, and is designed for surveys with household approach.

This frame is used with the following considerations:

- a. The sample list was drawn, systematically after arranging the villages by their geographic locations.
- b. For these selected census blocks a household list and a sketch of the census block were made during the field work of the 1983 agricultural census.
- c. The drawing of the sample is made easier by the use of computer since the frame is stored in BPS's computer.

2. Sample selection

For provinces in the first category described above the sample is selected by a two stage sampling design. In the first stage census blocks are selected and in the second about ten households from each sample blocks are visited.

For the rural areas in the provinces of the second category a three stage sampling design is applied. In the first stage sub-districts are selected; the second and third stage follows the same pattern as that in the first category. Sample selection in the urban areas of the provinces in the second category is exactly the same as in the first category.

Selection of the households is done as follows: in each district the number of households to be selected is ten times the number of census blocks assigned to the district. The sample interval is determined by the statistics office at the district level after the household listing is completed in all census blocks in the respective district. The same statistics office draws the random start for each census block.

This above mentioned design allows estimation to be made for each province classified by urban and rural areas. For areas with sufficient sample size estimates can also be calculated at the district level.

Structure and Contents

The data file consists of 5 record types: two Household Records, a Person Record, an Ever-Married Woman's Record, and a Health Record. Each record starts with 7 variables which provide information about the location of the census block. At the end of each record are 42 recoded and constructed variables.

1. Household Record I, Record Type 02, contains 7 variables. Variables 01-03 describe the number and age of household members. Variables 04 and 06 are the numbers of births and deaths in the household since June 30, 1984. Variable 07 is the date of survey.
2. Household Record II, Record Type 05, contains 23 variables. Variables 01 through 10 ask about land and household ownership. Variables 11-23 are the characteristics of the dwelling, including floor, roof, water/bath/toilet facilities, and household goods.
3. Person Record, Record Type 07, contains 46 variables on every person in the household. There is one record for each household member. Variables 01-07 include information about sex, marital status, religion, citizenship, etc. Variables 08-18 contain information about migration, variables 19-23 about education, and variables 24-46 about occupation and employment.
4. Ever-Married Women's Record, Record Type 09, contains 58 variables. Variable 01 is the serial number of the household member. Variables 02-15 are questions regarding marriage and children. Variables 16-55 ask questions regarding each child. Variables 56-58 are about contraception and family planning.
5. Health Record, Record Type 12, contains 42 variables. Variable 01 is the serial number of the household member. Variables 02-21 are the questions about child health including breast feeding and immunization. Variables 22-42 are about dead persons formerly living in the household.

Weighting Adjustment

The Indonesian Bureau of Statistics attached sample weights to household and individual records. These weights inflate the sample population to the total enumerated population. In the sample file, there are 12,541 Census Block Records (3,257 urban and 9,248 rural), 126,966 unweighted Household Records and 605,858 unweighted Person Records. Applying the weight variables for household produces 35,889,411 weighted Household. To obtain the adjustments of the weights, but without the inflation factor, multiply each household weight by the ratio 126,966/35,889,411.

INDEX AND LOCATION OF VARIABLES FOR HOUSEHOLD RECORD:RECORD TYPE 02

<u>Number</u>	<u>Variable</u>	<u>Variable Length</u>	<u>Position</u>	<u>Supas Question Number</u>
(V1)	Province	2	1 - 2	I-Q1

(2) KABUPATEN/KOTAMADYA
(Regency/Municipality)

3 - 4

Kabupaten and Kotamadya are administrative units at the second or sub-provincial level. Each Kabupaten or Kotamadya within a province is identified by a 2-digit code. To locate a Kabupaten, therefore, it will be necessary to use the 2-digit province code also. For example, Aceh Selatan, a Kabupaten in Aceh province is identified by the code 1101 (the first 2 digits 11, refer to the code for Aceh province, and the next two numbers 01, to the Kabupaten code). See Appendix A for a complete list of Kabupaten/Kotamadya codes.

Blank Not Applicable

ONLY ASKED FOR AGES TEN AND ABOVE

24 PRIMARY ACTIVITY PREVIOUS WEEK 52

An individual's primary activity for the previous week referred to that activity which occupied most of his/her time during that time. Unless otherwise noted the week preceding enumeration day was the usual reference period for all questions on work and employment, unless otherwise noted.

- 1 Working (skip to Variable 29)
- 2 Attending School
- 3 Housekeeping
- 4 Unable to work
- 5 Other

Blank Not Applicable (Aged less than 10)

25 PRIMARY ACTIVITY IS NOT WORKING BUT
HAD WORKED AT LEAST 1 HOUR LAST WEEK 53

- 1 Yes (skip to Variable 29)
- 2 No

Blank Not Applicable (Less than 10 years
old and coded "1" on V24)

This question was asked of persons who were coded 2, 3, or 4 on Variable 24, that is, those individuals who did not report work as their primary activity during the past week. The question in the census form was:
"Did you work for at least one hour during the past week?"

Variable Number	Variable Description and Codes: Person Record: Record Type (RT07)	Colt
--------------------	--	------

26	HAS JOB BUT DIDN'T WORK LAST WEEK	54
----	-----------------------------------	----

- 1 Yes (skip to variable 29)
- 2 No

Blank Not Applicable (Less than 10 years old or primary activity is working -- coded "1" on V24, or had worked at least "1" hour last week -- coded 1 on V25).

This question was asked of respondents who had answered "no" to the previous question on whether he/she had worked at least 1 hour the previous week. The census form question asked whether the person has a job but was temporarily absent from it or did not work during the past week.

27	EVER WORKED BEFORE	55
----	--------------------	----

- 1 Yes
- 2 No
- 9 No Answer

Blank Not Applicable (Less than 10 years old, or primary activity is working -- coded "1" on V24 -- or has worked at least 1 hour the previous week -- coded "1" on V25 -- or has job but didn't work last week -- coded "1" on V26).

Items 27 and 28 were asked of all those persons, 10 years and older, whose primary activity was something other than working, and who did not work at least 1 hour the previous week or who did not have a job that he/she was absent from last week.

28	LOOKED FOR WORK LAST WEEK	56
