TECHNICAL INFORMATION ON THE DATA TAPE

The Population and Housing data are stored on 2 separate tapes.

Population Tape:

DSN = TPOP90

LRECL = 128

BLKSIZE = 1280

RECFM = FB

LABEL = SL

VSN = CH209 (18-Track Cartridge)

BACKUP TAPES = CH207 - 18-Track Cartridge (SL)

CH307 - 9-Track Master-Tape (NL)

Housing Tape:

DSN = THSE90

LRECL = 149

BLKSIZE = 1490

RECFM = FB

LABEL = SL

VSN = CH203 (18-Track Cartridge)

BACKUP TAPES = CH208 - 18-Track Cartridge (SL)

CH308 - 9-Track Master-Tape (NL)

DESCRIPTION OF THE DATA FILE

This document describes the .012 sample file of the 1990 Population and Housing Census of Thailand. The household is the basic unit of enumeration. Households are first listed on Form 1 (see Appendix A.1) and the population is then enumerated with Form 2. There are two types of Form 2: the Short Form which is used to collect information on 10 population and 3 housing characteristics (see Appendix A.2). The Long Form which contains 26 population questions and 16 housing questions (see Appendix A.3). Part 1 of the Long Form identifies the household; Part 2 contains population questions; and Part 3 contains housing questions which are asked only of private households.

1990 Thailand Census Sample and Weights

The 1990 Thailand Census microdata sample file contains household and individual records of approximately 1.2 percent of the total enumerated population. The microdata sample is not, however, a random selection of the total census population, and weights are necessary to adjust for the criteria used for sample selection. The appropriate weights are listed at the end of this section and are included as variables P50 and H87 in the population and housing files, respectively. These weights, which are computed by the National Statistical Office, adjust for sample selection and inflate the sample to the total enumerated population. Analyses based the microdata sample should deflate the weighted sample size to equal the unweighted sample size. This can be done by multiplying the weight variable by (485,096/54,532,365) for population data file and (110,436/12,224,295) for housing data file.

The overall sample of 1.2 percent of the microdata is a combination of a 2 percent sample of the total population of Bangkok and all other municipal areas in the country and a 1 percent sample of all non-municipal areas. The sample selection is also adjusted for household type (collective vs. private households) and gender composition. The details are as follows.

The microdata sample file is a sample of the census population which is enumerated with the long-form questionnaire. There are two forms used to enumerate the population. The short-form includes only 13 population and housing questions while the long-form has 26 population and 16 housing questions. The long-form sample is a selected with different sampling fractions from 9 strata. The strata are municipal and non-municipal areas in the four major regions (North, Northeast, Central, and South) with Bangkok as a separate region. Municipal areas are defined (by the Thai Ministry of Interior) as localities (sub-divisions of amphoe) that meet population and density criteria. One-fifth of the households and population in Bangkok and non-municipal areas are enumerated with the long-form while all households and population in the other municipal areas are enumerated with the long-form.

The microdata sample is selected in a two-stage process from the long-form sample. The first stage is the selection of enumeration districts (EDs) within each of the nine strata. For Bangkok and other municipal areas, 40 percent of all EDs are selected. For non-municipal areas, 20 percent of EDs are selected. Then households are selected within EDs with a different selection rule for private and collective households. For private households, 25 percent of households in Bangkok and non-municipal areas are selected while 5 percent of households in other municipal areas are selected. For collective households, a 5 percent sample is selected across all strata.

From the total enumerated population to the final microdata sample, the sampling procedures can be summarized as:

Bangkok: $.2 \text{ (long-form)} \times .4 \text{ (ED sample)} \times .25 \text{ (hh sample)}$
 = .02 sample
 Municipal: $1.0 \text{ (long-form)} \times .4 \text{ (ED sample)} \times .05 \text{ (hh sample)}$

= .02 sample
 Non-Municipal: .2 (long-form)*.2(ED sample)*.25(hh sample)
 = .01 sample

The final sample weights also include an adjustment for strata and gender composition. The weight tables for the population and housing files are listed in Appendix F.

Structure and Content of Population Data File

Each individual record occupies 128 columns. The first 17 variables (columns 1 to 34) are characteristics of the household in which the individual resides. Variables P18 to P45 contain the individual characteristics (columns 35 to 91). Not all of the individual characteristics are collected for every person. For example, questions on work are only asked of persons 13 years and older, and family planning items only apply to currently married women aged 50 years and below. There are 485,096 individual records. Applying the weight factor yields 54,532,365 weighted records.

There are three variables that are computed by NSO at the data processing stage -- age, children ever-born, and the number of children still living -- on each record, in columns 93 to 98. The last variable is the weighting factor, located in columns 124 to 128. It should be read with an implied decimal of two places or divided by 100. For most analyses, the weight should be deflated as noted in the prior section.

Structure and Content of Housing Data File

In the housing file, each record represents one household. The record occupies 149 columns. The first 49 variables (columns 1 to 98) refers to the head of the household (the variables are from the population data file). Variables H50 to H66A are characteristics of the household in which the head of household resides. Variables H67 to H86 contain information on the ownership of various consumer durables (columns 125 to 144). There are 110,436 individual records. Applying the weight factor yields 12,224,295 weighted records.

The last variable is the weighting factor, located in Columns 145 to 149. It should be read with an implied decimal of two places or divided by 100. Most users of the sample file will employ the weight variable but deflate the sample size to the original unweighted sample N. To do this, multiply the weight variable by the ratio of the unweighted sample size to enumerated number of households in the 1990 housing census (inflated size), $(110,436/12,224,295)$.

	PHETCHABUN	39	SATUN	58	
	PHRAE	40	SURAT THANI	66	
P3	DISTRICT (Amphoe)				4 - 5
	All provinces or <u>Changwat</u> in Thailand are divided into districts or <u>Amphoe</u> . Each Amphoe within a province is identified by a two digit code, ranging from 01 to 36. See Appendix C for Amphoe codes.				
P4	MUNICIPALITY (Tambon)				6 - 7
	The term "Municipality" refers to an administrative status conferred by the Thai Ministry of Interior on a locality that meets certain population size and density criteria. <u>Amphoe</u> or districts include both non-municipal and municipal areas.				
P5	TYPE OF TAMBON				8
	1	Municipal Area			
	2	Sanitary District			
	4	Outside M.A. or S.D.			
	(codes 2 and 4 are Non-municipal areas)				

Variable Number	Variable Description and Codes	Column
--------------------	--------------------------------	--------

P6	NUMBER OF SANITARY DISTRICTS IN TAMBON (NON-MUNICIPAL)	9
----	---	---

A sanitary district refers to a locality that has met the minimum population size to qualify as a municipality but, based on a review by the Ministry of Interior, "has not yet developed those characteristics generally associated with "Urbanism" (Visid Prachuabmoh and Penporn Tirasawat, 1974: Internal Migration in Thailand, Paper No. 7, Institute of Population Studies, Chulalongkorn University). Sanitary districts are a geographical and administrative units that lie between the rural district level and municipalities. Prachuabmoh and Tirasawat (1974:12) note that "in the Thai Census. . . sanitary districts have been included in the rural population."

0 Not Part of a Sanitary District
1-8 Sanitary District Code

Each sanitary district is numbered sequentially within each Amphoe (or district).

P7	ENUMERATION DISTRICT NUMBER (ED)	10 - 12
----	----------------------------------	---------

This is a 3-digit code, ranging from 001 to 998, used to identify Enumeration Districts within municipal and non-municipal areas. An ED is defined as an area assigned to an enumerator to be completed during the enumeration period. In municipal areas an ED consists of one or two blocks, containing about 200-300 households. In non-municipal areas, the ED consisted of 250-350 households, and could be part of a village, a whole village, or more than one village.

Variable Number	Variable Description and Codes	Column
P8	BLOCK OR VILLAGE NUMBER	13 - 14
	01-98 Village Number (in non-Municipal Areas) or Block Number (in Municipal Areas)	
	The village or block number is a 2-digit code identifying villages in non-municipal (or rural) and blocks in municipal (or urban) areas. These identification numbers are used in mapping areas for enumeration of the population and households.	
P9	LIVING QUARTERS NUMBER	15 - 18
	Blank Not Applicable	
	(Living quarters are numbered sequentially within each enumeration district)	
P10	TYPE OF LIVING QUARTER	19 - 20
	01 Detached House	
	02 Town House	
	<u>Apartment, Flat and Others (03-06)</u>	
	03 Apartment

P12	TYPE OF HOUSEHOLD	22
	1 Private Household 2 Collective Household The household is the basic unit of enumeration in the census. Private households referred to those where persons living together in a house, or part of a house, and share food and other essentials for living. All other households are considered collective households.	
P13	HOUSEHOLD NUMBER	23 - 26
	Blank Not Applicable	
	Each household is identified by a 4 digit number within each ED, starting from 0001.	
P14	NUMBER OF PERSONS IN HOUSEHOLD	27 - 30
	Blank Not Applicable	
	Persons to be enumerated are counted on a de jure basis (students are counted where they study). This variable is a count of the total number of persons who usually reside in a household, e.g., 0001 is coded for a household with only 1 person in it.	
P15	LANGUAGE USUALLY SPOKEN IN THE HOUSEHOLD	31
	1 Thai 2 Thai With Other Language 3 Other Language If P15 equals 1, ask P17. Else, ask P16.

5	Miners, Quarrymen, Well Drillers and Related Workers
6	Transport Equipment Operators and Related Workers
7 - 8	Craftsmen, Production Workers and Laborers
9	Service Workers

9970 Workers not classifiable by Occupation

9980 Not working

9999 Unknown

Blank Not Applicable (Persons Below 11 Year Old)

P26 refers to the individual's usual occupation (what he/she was doing most of the time) during the 12 months preceding the census data (April 1, 1989 - March 31, 1990). The above list contains only the codes for the major occupational groups. See Appendix D for detailed codes.

P27	INDUSTRY LAST YEAR	56 - 59
-----	--------------------	---------

<u>Group</u>	<u>Description</u>
	Agriculture, Forestry and Hunting Fishing Mining and Quarrying Electric, Gas and Water Construction and Repair
6	Wholesale and Retail Trade
7	Hotels and Restaurants
8	Transport Storage and Communication
9	Banks and Other Financial Institutions, Insurance and Real Estate
10	Public Administration and Defense
11	Services
9999	Activities Not Adequately Described
Blank	Not Applicable (Persons Below 11 Years Old)

Variable Number	Variable Description and Codes	Column
--------------------	--------------------------------	--------

P27 refers to the usual industry of employment during the 12 months preceding the census date. The above list contains only the codes for the major industry categories. See Appendix E for detailed codes.

P28 WORK STATUS 60

1 Employer
2 Self-employed or Own Account
Worker With no Employees

Government Employee (3-4)
3 Government Official
4 Employee (subordinate)

5 Government Enterprise Employee
6 Private Employee
7 Unpaid Family worker
9 Unknown Status
Blank Not Applicable (persons below 11
years old and coded "9980" -- not
working -- on P26)

FOR EVERY PERSON

P29 LINE NUMBER OF MOTHER 61 - 62

01 Person's Mother's Line Number is
01
02 Person's Mother's Line Number is
02
. .
. .
31 Person's Mother's Person Line
Number is 31 and Above
95 Mother not in Household
99 Unknown
Blank Not Applicable

P29 is based on responses to the Census Form question: "Is mother living in this household?" If the mother is in the household, her line number (from P18) is recorded here.

Variable Number	Variable Description and Codes		Column
